

Special Issue on Natural Hazards and Global Change

Call for Papers

Natural hazard is refers to a threat of naturally occurring event will have a negative effect on humans. The impact of global environmental changes and changes in economic developments and their locations suggests that population and economic changes, increasing the exposure to risks, is a major factor in increasing disaster losses and human suffering over time. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of **natural hazards and global change**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **natural hazards and global change**. Potential topics include, but are not limited to:

- Climate change on natural disasters
- Types of natural disasters
- Forecasting of catastrophic events
- Risk assessment and management
- Disaster response and preventive action
- Hazard evaluation, mapping and mitigation
- Global change and environmental protection

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Natural Hazards and Global Change**” should be selected during your submission.

Special Issue timetable:
