

Special Issue on Advances in Cognitive Psychology

Call for Papers

Cognitive psychology is a subdiscipline of psychology exploring internal mental processes. It is the study of how people perceive, remember, think, speak, and solve problems.

Cognitive psychology differs from previous psychological approaches in two key ways.

It accepts the use of the scientific method, and generally rejects introspection as a valid method of investigation - in contrast with such approaches as Freudian psychology.

It explicitly acknowledges the existence of internal mental states.

In its early years, critics held that the empiricism of cognitive psychology was incompatible with its acceptance of internal mental states. However, the sibling field of cognitive neuroscience has provided evidence of physiological brain states that directly correlate with mental states - thus providing support for the central assumption of cognitive psychology.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Advances in Cognitive Psychology**.

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue — Advances in Cognitive Psychology**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	May 31st, 2013
Publication Date	July 2013
