

## Special Issue on Plant Pathology

### Call for Papers

Central to plant pathology is the disease triangle, a model showing the interactions between host, pathogen, and environment that lead to disease. For disease to occur, conditions for all of these components must be optimal. Disease-suppressive soils manipulate the environment, reducing conduciveness to disease despite the presence of a pathogen and susceptible host . The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **plant pathology**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **plant pathology**. In this special issue, potential topics include, but are not limited to:

- Pathological analysis
- Plant pathogens
- Plant disease epidemiology
- Physiological plant disorders
- Molecular methods in plant disease diagnostics
- Disease resistance
- Management of plant diseases

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Plant Pathology**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	May 16th, 2026
Publication Date	July 2026

#### Guest Editor:

Dr. ZARMINA GUL Northeast Forestry University, Harbin, Heilongjiang, China.  
Prof. WenHua Wu, Gansu Agricultural University, China.
