

## Special Issue on Mathematical Theory of Reliability

### Call for Papers

**Reliability Theory** is used to study the products based on the life-span characteristic. Reliability refers to the ability that the product completes its intended function under certain conditions. Mathematical theory of reliability has a wide application in engineering and industrial systems. As an indispensable fundamental in research subjects, **mathematical theory of reliability** is of great attractions to researchers.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **mathematical theory of reliability**. In this special issue, potential topics include, but are not limited to:

- Evaluating the reliability of industrial systems
- Evaluating the reliability of manufactured goods
- The theory of coherent systems
- Statistics analysis of life data
- Reliability engineering
- The applications of mathematical theory of reliability in engineering and industry

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly note that the “**Special Issue**” under your manuscript title should be specified and the research field “**Special Issue - *Mathematical Theory of Reliability***” should be selected during your submission.

Also please note the following timetable:

Submission Deadline	December 4th, 2014
Publication Date	February 2015
