

Special Issue on Soil Environment and Agriculture

Call for Papers

The soil is one of the most important bases of subsistence and a resource that is renewable to only a limited degree. Soil performs many vital functions. Soil fertility is a make or break factor for agriculture. But the impact of soil and agriculture on each other is not merely reciprocal: water, air, climate and biodiversity protection are also particularly important for these two elements. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **soil environment and agriculture**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **soil environment and agriculture**. In this special issue, potential topics include, but are not limited to:

- Digital soil and resource management
- Soil fertility and oriented cultivation improvement
- Plant nutrition and efficient fertilizer application
- Soil biology and interface processes
- Soil use and environmental change
- The enhancement of soil biodiversity
- Reduction of soil erosion, contamination and compaction

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Soil Environment and Agriculture**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	October 29th, 2019
Publication Date	December 2019
