

Special Issue on Research on Agronomy

Call for Papers

Agronomy is a science and a practice that looks at agriculture from an integrated, holistic perspective. In agronomy, it's important to understand the properties of the soil and how the soil interacts with the growing crop; what nutrients (fertilizers) the crop needs and when and how to apply these nutrients; the ways that crops grow and develop; how climate and other environmental factors affect the crop at all stages; and how best to control weeds, insects, fungi, and other crop pests. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Research on Agronomy**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Research on Agronomy**. In this special issue, potential topics include, but are not limited to:

- Crop breeding and genetics
- Chemistry, biology, and genetics applied to agronomy
- Biotechnology for farming and the use of plants, plant breeding
- Farming and cropping systems
- Precision agriculture
- Crop-livestock interactions
- Crop and soil interactions
- Organic farming

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Research on Agronomy**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	December 18th, 2019
Publication Date	February 2020
