Special Issue on Soil Fertility and Soil Conservation

Call for Papers

Soil fertility is the ability of soil to sustain plant growth and optimize crop yield. This can be enhanced through organic and inorganic fertilizers to the soil. Nuclear techniques provide data that enhances soil fertility and crop production while minimizing the environmental impact. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Soil Fertility and Soil Conservation**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Soil Fertility and Soil Conservation**. In this special issue, potential topics include, but are not limited to:

- Soil, pedogenesis process
- Physical parameters of soil and their role in soil fertility
- Soil fertility and soil chemistry
- Soil erosion, depletion and conservation
- Soil quality
- Improving soil fertility
- Soil fertility management
- Soil fertility and crop growth

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Soil Fertility and Soil Conservation***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	March 28th, 2023
Publication Date	May 2023
