Special Issue on Fisheries & Aquaculture

Call for Papers

Fisheries encompass the social, biological, and geographical aspects associated with the production of fish for human consumption. These fishing activities are typically characterized by shared geographical locations, specific catch methods, and/or target species. The field of fisheries science focuses on examining the various factors that influence the sustainability of the catch and fish stocks. By studying these factors, fisheries scientists aim to understand and address the challenges related to maintaining sustainable fish populations and ensuring the long-term viability of these important natural resources. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **fisheries & aquaculture** .

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **fisheries & aquaculture**. In this special issue, potential topics include, but are not limited to:

- Research in sustainable fisheries
- Fisheries in salt, brackish and freshwater systems
- Fish biology and ecology
- Fish stock assessment and management
- Aquaculture systems and technology
- Fish health and disease
- Aquatic ecosystem management
- Fisheries economics and policy
- Seafood quality and safety
- Coastal and marine conservation
- Fish behavior and physiology
- Fish genetics and breeding

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Fisheries & Aquaculture***" should be selected during your submission.
