

Special Issue on Electronic Engineering

Call for Papers

Electronics Engineering is involved with the development of small-scale electronic systems to transmit information. All electronic devices are powered from a battery or mains electricity source. Unlike the other disciplines within Electrical Engineering, Electronics Engineering deals exclusively with active electrical components. Active components of a circuit are designed by Electrical Engineers to add power (for example amplifiers). The goal of this special issue is to provide a platform for scientists and academics all over the world to promote, share and discuss various new issues and developments in **electronic engineering**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **electronic engineering**. In this special issue, potential topics include, but are not limited to:

- Analogue electronic engineering
- Radio frequency engineering
- Digital development engineering
- Circuits and systems
- Communication engineering
- Electronic circuit
- Software engineering

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - *Electronic Engineering***” should be selected during your submission.

Special Issue timetable:

Submission Deadline	June 28th, 2026
Publication Date	August 2026

Guest Editor:

Prof. Minghe Chi, Harbin University of Science and Technology, China.
Assoc. Prof. Guowei LEI, School of Science, Jimei University, China.
