

Special Issue on Aging Research

Call for Papers

Decline in physical function is associated with falls, recurrent hospitalization, disability, and dependency and often follows a trajectory characterized by a hierarchical sequence of impairments. The identification of potentially modifiable factors that may adversely affect the slope of this trajectory is essential to inform the development of cost-effective strategies aimed at preventing or delaying dependence in older persons. Although nutrition and body composition are generally considered as important factors contributing to decline in physical function with aging, a number of emerging gaps in the current scientific knowledge still need to be addressed.

In this special issue, we are going to invite front-line researchers and authors to submit original research and review articles that explore **Aging Research**. Potential topics include, but are not limited to:

- Physical, mental, and social changes in ageing population
- Aging (ageing) process itself (biogerontology)
- The effects of an ageing population on society
- Regulation of ageing
- Mechanisms of ageing and age-related diseases such as Alzheimer's disease, cancer, cardiovascular disease, diabetes, neurodegenerative disorders and etc
- Anti-aging strategies
- Cell growth and senescence
- Modulation of DNA, DNA damage and repair

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the re-search field “**Special Issue- Aging Research**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	October 23rd, 2013
Publication Date	December 2013
