

Special Issue on Research of Parkinson's Disease

Call for Papers

Parkinson's disease is a progressive nervous system disorder that affects how people move, speak and write. Symptoms develop gradually and may start off with slight tremors in one hand, and then people find it hard to carry out movements and muscles become weaker and weaker. According to statistics, about 10 million people around the world are estimated to be living with Parkinson's disease. What's more, Males and people whose age is over 50 have a higher risk to get this disease. As more and more people suffer from **Parkinson's disease** and effective treatments seem quite limited, further study on this disease has become necessary and meaningful to researchers.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **research of Parkinson's disease**. Potential topics include, but are not limited to:

- Subtypes of parkinsonian syndromes
- Signs and symptoms of Parkinson's disease
- Causes of Parkinson's disease
- Pathology of Parkinson's disease
- Epidemiology of Parkinson's disease
- Prognosis and diagnosis of Parkinson's disease
- Prevention measures and treatment
- Medication and Surgery
- Cases of Parkinson's disease

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - Research of Parkinson's Disease**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	October 8th, 2014
Publication Date	December 2014
