

## Special Issue on Osteoporosis

### Call for Papers

Osteoporosis is a condition that weakens bones, making them fragile and easy to break. Anyone can develop osteoporosis, but it is common in older women. About half of all women over the age of 50 will have a fracture of the hip, forearm, or vertebra during their lifetime. Risk factors for osteoporosis include family genetics, aging, low body weight, low sex hormones or menopause, smoking, and some medications.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Osteoporosis**. Potential topics include, but are not limited to:

- Signs and symptoms
- Risk factors for osteoporotic fracture
- Causes of osteoporosis
- Osteoporosis and complications
- Osteoporosis and diet
- Treatments and therapies

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Osteoporosis**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	October 28th, 2015
Publication Date	December 2015
