

Special Issue on
The Sun-Earth, Star-Planet and Planet-Moon Connections

Call for Papers

There have been many effects on Earth attributed to the Sun, supernova and cosmic rays. These include climate change, biodiversity and tectonic activity. The Earth is clearly influenced by impacts, tidal forces and radiation from other solar system bodies as well as objects further afield. Now, all these effects are being advanced as explanations for measured activity in an amplified form in exoplanetary systems.

The proposed volume of IJAA will focus on this joint area of space science and astronomy, bringing together the Solar System and Exoplanet Systems, while also bringing together theory, observations and their interpretation in one volume.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **The Sun-Earth, Star-Planet and Planet-Moon Connections**.

Authors should read over the journal's [Author's Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "Special Issue" under your manuscript title is supposed to be specified and the research field "Special Issue-The Sun-Earth, Star-Planet and Planet-Moon Connections" should be chosen during your submission.

According to the following timetable:

Manuscript Due	February 28th, 2013
Publication Date	April, 2013

Editor-in-Chief

Prof. **Michael D. Smith**
University of Kent, UK
