

Special Issue on Geochemistry Research

Call for Papers

Geochemistry is to explain the mechanisms behind major geological systems such as the Earth's crust and its oceans by using the tools and principles of chemistry. Geochemistry applies in many aspects of human endeavor, such as the preservation of the environment, environmental monitoring, agriculture, health, waste disposal and the search for resources. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **geochemistry research**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **geochemistry research**. In this special issue, potential topics include, but are not limited to:

- Organic geochemistry
- Body chemistry
- Environmental geochemistry
- Ore deposit geochemical
- Exploration geochemistry
- Isotope geochemistry
- Medical geochemistry

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Geochemistry Research**” should be chosen during your submission.

Also please note the following timetable:

Submission Deadline	September 25th, 2014
Publication Date	November 2014
