

Special Issue on Geography and Geomorphology

Call for Papers

Geography is the science that studies the lands, the features, the inhabitants, and the phenomena of the Earth. Four historical traditions in geographical research are the spatial analysis of the natural and the human phenomena, the area studies, the study of the man-land relationship, and the research in the earth sciences. Nonetheless, the modern geography is an all-encompassing discipline that foremost seeks to understand the Earth and all of its human and natural complexities-not merely where objects are, but how they have changed and come to be. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of geography and geomorphology.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **geography and geomorphology**. In this special issue, potential topics include, but are not limited to:

- Biogeography
- Glaciology
- Palaeogeography
- Coastal geography
- Cultural geography
- Economic geography
- Health geography
- Religion and geography
- Urban geography
- Ancient geomorphology
- Early modern geomorphology
- Quantitative geomorphology
- Contemporary geomorphology
- Scales in geomorphology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Geography and Geomorphology**” should be chosen during your submission.

Special Issue timetable:

Submission Deadline	May 11th, 2016
Publication Date	July 2016
