Special Issue on

Finite Element Analysis method and Its Applications

Call for Papers

The finite element method has become the most successful approximation method in engineering. There is a variety of detailed approaches based on the finite element method. The central idea of the finite element method is to use different variational principles together with a Galerkin procedure applied to picewised smooth function. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **finite element analysis method and its applications**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **finite element analysis method and its applications**. In this special issue, potential topics include, but are not limited to:

- Dynamic finite element
- Mixed finite element method
- Finite element machine
- Interval finite element
- Finite element method in structural mechanics
- Boundary element method

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Finite Element Analysis method and Its Applications***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 24th, 2020
Publication Date	September 2020
