Special Issue on Computer Vision and Image

Call for Papers

Computer vision is a field that includes methods for acquiring, processing, analyzing, and understanding images and, in general, high-dimensional data from the real world in order to produce numerical or symbolic information. Computer vision and image are important and fast evolving areas of computer science, and have been applied in many disciplines such as biomedicine, mobility, safety, production, society, media, etc.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Computer Vision and Image**. Potential topics include, but are not limited to:

- Motion
- Range
- Shape
- Systems and tools
- Computational models
- Machine intelligence
- Data structures and representations
- Architecture and languages
- Matching, inference and recognition
- Algorithms and applications

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Computer Vision and Image***" should be selected during your submission.

Special Issue Timetable:

Submission Deadline	June 30th, 2016
Publication Date	August 2016

Guest Editor:

Scientific Research
Open Access
