

## Special Issue on Coding and Cryptography

### Call for Papers

Coding theory includes the study of compression codes which enable us to send messages cheaply and error correcting codes which ensure that messages remain legible even in the presence of errors. Cryptography on the other hand, makes sure that messages remain unreadable — except to the intended recipient.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Coding and Cryptography**. Potential topics include, but are not limited to:

- Coding theory
- Types of codes
- Cipher design and cryptanalysis
- Cryptographic algorithms
- Authenticated encryption
- Codes construction, existence and analysis
- Decoding algorithms

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Coding and Cryptography**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	August 25th, 2016
Publication Date	October 2016
