
Special Issue on Computer and System Sciences

Call for Papers

In computer science and information science, system is a hardware system, software system, or combination, which has components as its structure and observable inter-process communications as its behavior. System can also refer to a framework, aka platform, be it software or hardware, designed to allow software programs to run. A flaw in a component or system can cause the component itself or an entire system to fail to perform its required function.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Computer and System Sciences**. Potential topics include, but are not limited to:

- Computing and information systems
- Algorithms in computer systems
- Computer systems and networking
- Artificial neural network
- Complexity of a distributed computing system
- Computer system models
- System dynamics
- System architecture and design
- Security-aware optimization
- Computer control systems
- Fuzzy systems modeling
- Hierarchical clustering for software systems
- Application of ant colony system algorithm
- Cognitive computing systems
- Combinatorial methods with computer applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Computer and System Sciences**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 7th, 2022
Publication Date	March 2022

For publishing inquiries, please feel free to contact the Editorial Assistant at submission.entrance1@scirp.org
