

Special Issue on High Energy Physics

Call for Papers

High energy physics or particle physics is a branch of physics that studies the existence and interactions of particles that are the constituents of what is usually referred to as matter or radiation. In current understanding, particles are excitations of quantum fields and interact following their dynamics.

Modern particle physics research is focused on subatomic particles, including atomic constituents such as electrons, protons, and neutrons (protons and neutrons are composite particles called baryons, made of quarks), produced by radioactive and scattering processes, such as photons, neutrinos, and muons, as well as a wide range of exotic particles. To be specific, the term particle is a misnomer from classical physics because the dynamics of particle physics are governed by quantum mechanics. As such, they exhibit wave-particle duality, displaying particle-like behavior under certain experimental conditions and wave-like behavior in others.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **High Energy Physics**.

Authors should read over the journal's [Author's Guidelines](#) carefully before submission, Prospective authors should submit an electronic copy of their complete manuscript through the journal [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue - High Energy Physics**" should be chosen during your submission.

According to the following timetable:

Manuscript Due	February 28th, 2013
Publication Date	April, 2013

Editors-in-Chief

Prof. **Victor Yashnikov**,
Russian Academy of Sciences, Russia
