

## Special Issue on Field Theory

### Call for Papers

**Field Theory** is a physical theory which belongs to fields in the physical sense, consisting of two types: classical field theory and quantum field theory. A classical field theory is a theory describes the study of how physical fields interact with matter. However, a quantum field theory refers to a theoretical framework for constructing quantum mechanical model of subatomic particles in particle physics and quasiparticles in condensed matter physics, by treating a particle as an excited state of an underlying physical field.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **field theory**. Potential topics include, but are not limited to:

- Classical field theory
- Quantum field theory
- String theory
- Gauge theory
- Non-relativistic theory
- Applications of field theory

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Field Theory**” should be chosen during your submission.

According to the following timetable:

Manuscript Due	July 9th, 2015
Publication Date	September 2015

**Guest Editor:**
