

## Special Issue on Dark Matter and Dark Energy

### Call for Papers

It is suggested that the apparently disparate cosmological phenomena attributed to so-called “dark matter” and “dark energy” arise from the same fundamental physical process: the emergence, from the quantum level, of spacetime itself. This creation of spacetime results in metric expansion around mass points in addition to the usual curvature due to stress-energy sources of the gravitational field. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **dark matter and dark energy**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **dark matter and dark energy**. In this special issue, potential topics include, but are not limited to:

- Observational evidence
- The origin of dark matter and dark energy
- The formation of dark matter and dark energy
- Dark energy model
- The composition of dark matter and dark energy
- Detection of dark matter particles
- Big tear theory
- Theories of dark energy
- Implications for the fate of the universe

Authors should read over the journal’s [Authors’ Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal’s [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Dark Matter and Dark Energy**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 16th, 2021
Publication Date	September 2021

**Guest Editor:**

For further questions or inquiries
