

Special Issue on Biophysics Research

Call for Papers

Biophysics is an interdisciplinary scientific field that applies the theories, methodologies, and quantitative frameworks of physics and chemistry to understand the structure, dynamics, function, and regulation of biological systems across all scales of organization — from individual atoms and molecules to cells, tissues, organisms, and ecosystems. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Biophysics Research**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Biophysics Research**. In this special issue, potential topics include, but are not limited to:

- Molecular Biophysics
- Structural Biophysics
- Single-Molecule Biophysics
- Membrane Biophysics
- Computational Biophysics & Molecular Simulation
- Biomechanics & Mechanobiology
- Neurobiophysics
- Biophysical Imaging & Instrumentation

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Biophysics Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 25th, 2026
Publication Date	September 2026
