## Special Issue on Software and Systems Security

### Call for Papers

Software and systems security is a field focused on protecting software applications and computing systems from threats, vulnerabilities and attacks. It covers secure software design, vulnerability analysis, cryptography, access control, malware defense, system hardening and risk management, aiming to ensure the confidentiality, integrity, and availability of digital systems across diverse computing environments.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Software and Systems Security**. Potential topics include, but are not limited to:

- Secure software engineering
- Security architecture and design
- Vulnerability assessment and penetration testing
- Cryptography and applied cryptographic systems
- Operating systems and kernel security
- Program analysis and software security
- Hardware security and trusted computing
- Network and distributed systems security
- Malware analysis and reverse engineering
- Authentication, authorization and access control
- Application and web security
- Cyber-physical systems (CPS) and IoT security
- Security monitoring and incident response
- Formal methods and verification
- Privacy and data protection
- Usable security & privacy

**Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).**

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Software and Systems Security**” should be chosen during your submission.

According to the following timetable:

Scientific Research  
*Open Access*

## Journal of Software Engineering and Applications

ISSN Online: 1945-3124
