

Special Issue on Evapotranspiration Research

Call for Papers

Evapotranspiration is a measurement of the amount of soil water lost to the atmosphere via evaporation from the ground surface and from the plant leaves. The latter process is also called transpiration. Historically, ET was measured by how much water was evaporated from an open pan of water on a given day. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **evapotranspiration research**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **evapotranspiration research**. In this special issue, potential topics include, but are not limited to:

- Soil surface water evaporation
- Plant transpiration
- Water vapour transport
- Nature water cycle
- Water percolation
- Pan evaporation
- Evaporation energy balance

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Evapotranspiration Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	July 30th, 2015
Publication Date	September 2015
