

Special Issue on Hydrological Engineering

Call for Papers

Hydrological engineering, also called water resources engineering. Hydrological engineering is chiefly concerned with the flow and storage of water. Topics commonly covered include urban drainage, water supply, wastewater treatment, river management and coastal protection. Hydrological engineering also focuses on preventing floods and lessening the effects of floods, droughts and other natural disasters. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of hydrological engineering.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **hydrological engineering**. In this special issue, potential topics include, but are not limited to:

- Water storing design
- Water cycle management
- Flood control
- Coastal protection
- Watershed hydrology
- Probability and numerical analysis
- Turbulent flows and environmental hydraulics

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly note that the “**Special Issue**” under your manuscript title should be specified and the research field “**Special Issue - Hydrological Engineering**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	September 8th, 2016
Publication Date	November 2016
