

Special Issue on

Planning and Management of Urban Water System

Call for Papers

The research contents of urban water system involve the protection of water resources and environment, the construction and operation of water sources, water supply, water use, drainage, water treatment and reuse projects, the management policies and relevant laws of national resources and industrial development. With the development of social economy and the accelerated process of urbanization, the contradiction between supply and demand of water is more prominent. Cities will face multiple challenges, such as water shortage, water environment deterioration, and how to improve the quality of water supply. Therefore, it is necessary to seek a new and more effective solution to the urban water crisis strategy.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **planning and management of urban water system**. Potential topics include, but are not limited to:

- Urban drainage system
- Urban wastewater regeneration
- Urban water pollution
- Urban flood management
- Urban water industry
- Drinking water management
- Water conservancy economy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Planning and Management of Urban Water System**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 16th, 2018
Publication Date	July 2018
