

Special Issue on Prevention and Control of Water Pollution

Call for Papers

Water is a basic natural resource and strategic economic resource. It plays a key role in maintaining human survival, ensuring social development and maintaining the balance of the ecological environment. The increasingly severe water pollution worsens the water quality, destroys the normal function of water body, reduces the use value of water, and aggravates the contradiction of water resources supply. Strengthen environmental awareness, adhere to the "implementing throttling priority, pollution control oriented, multi-channel development of water resources" sustainable development strategy, is an important measure to prevent and control water pollution.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **prevention and control of water pollution**. Potential topics include, but are not limited to:

- Point-source pollution control
- Physical and chemical water pollutants
- Water pollutants flow and chemical reaction
- Urban runoff control
- Prevention and control of harbour pollution
- Prevention and control of groundwater pollution
- Drinking water source protection
- Water pollution control
- Water-saving emission reduction
- Ecological flow research

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue – Prevention and Control of Water Pollution**" should be chosen during your submission.

According to the following timetable:

Submission Deadline	May 23rd, 2019
Publication Date	July 2019

Guest Editor:

Scientific Research
Open Access

Journal of
Water Resource and Protection
ISSN Online: 1945-3108
