Special Issue on Image Processing

Call for Papers

Image processing is a method to perform some operations on an image, in order to get an enhanced image or to extract some useful information from it. It is a type of signal processing in which input is an image and output may be image or characteristics/features associated with that image. Nowadays, image processing is among rapidly growing technologies. It forms core research area within engineering and computer science disciplines too. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Image Processing**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Image Processing**. In this special issue, potential topics include, but are not limited to:

- Signals and systems
- Importing the image via image acquisition tools
- Analysing and manipulating the image
- Analog image processing
- Convert signals from an image sensor into digital images
- Improve clarity, and remove noise and other artifacts
- Extract the size, scale, or number of objects in a scene
- Prepare images for display or printing
- Compress images for communication across a network

Authors should read over the journal's For Authors carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly specify the "**Special Issue**" under your manuscript title. The research field "**Special Issue - *Image Processing***" should be selected during your submission.

Special Issue timetable:

Submission Deadline	December 16th, 2026
Publication Date	February 2027
