

Special Issue on Silviculture

Call for Papers

Silviculture is the study of the development, structure and function of forests and seeks how to cultivate, manage, protect and utilize them. The aim of silviculture is to clarify the basic rules of forests formation, growth and development, to understand the intrinsic mechanism of forest tree production and its relationship with the environment, and clarify the relationship between forest structure and forest life. More crucially, silviculture is also used to study how to solve the important issues faced in forestry production, such as rapid recovery of forest resources, effective utilization of wood resources, enhance forest resilience to natural disasters, etc.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **silviculture**. Potential topics include, but are not limited to:

- The basic principles of forest tending
- Forest seedlings cultivation
- Forest construction
- Forest tending and harvesting
- Planning and design of forest landscapes
- Forestry ecological engineering

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Silviculture**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	June 28th, 2018
Publication Date	August 2018
