

Special Issue on Environmental Geology and Geochemistry

Call for Papers

Environmental geology is a discipline that studies the interaction between human activities and the geological environment. The research contents of environmental geology include environmental geological problems caused by nature and human. As natural disasters become more and more serious, human knowledge and research on the geological environment have advanced to a new level, indicating that we must study both the impact of the geological environment on people and the role of people on the geological environment. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Environmental Geology and Geochemistry**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Environmental Geology and Geochemistry**. Potential topics include, but are not limited to:

- Aqueous geochemistry
- Biogeochemistry
- Cosmochemistry
- Organic geochemistry
- Regional geochemistry
- Hydrogeochemistry, surface and groundwater
- Trace metals in the ocean
- Defining and mitigating exposure of natural hazards on humans
- Assessment methods in Environmental geology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Environmental Geology and Geochemistry**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	September 13th, 2020
Publication Date	November 2020
