

Special Issue on Environmental Geology

Call for Papers

Environmental geology is an applied branch of geology that focuses on the interaction between human activities and the geological environment. It involves the study of earth processes such as earthquakes, landslides, floods, and volcanic eruptions, as well as the assessment and mitigation of natural hazards. Environmental geology also addresses issues related to groundwater and surface water contamination, soil degradation, resource management, and the environmental impacts of mining, construction, and waste disposal. By integrating geological knowledge with environmental concerns, this field plays a crucial role in sustainable development, land-use planning, and protecting human health and ecosystems.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Environmental Geology**. Potential topics include, but are not limited to:

- Anthropogenic activities
- Climate change and geology
- Coastal processes and management
- Environmental geochemistry
- Environmental monitoring and remediation
- Geogenic events
- Geologic hazards and risk assessment
- Geological engineering
- Geotechnical stability
- Hydrological and hydrogeological conditions
- Industrial ecology
- Land use planning and geology
- Landform analysis
- Natural resource management
- Nonrenewable resources
- Soil erosion
- Topography

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - *Environmental Geology***” should be selected during your submission.

Special Issue Timetable:

| | |
|---------------------|--------------------|
| Submission Deadline | October 22nd, 2025 |
| Publication Date | December 2025 |
