

Special Issue on Human Pathology

Call for Papers

Human Pathology examines the structural, cellular, and molecular alterations that occur in human tissues and organs as a result of disease and injury. It integrates findings from histopathology, molecular biology, immunology, genetics, and clinical medicine to investigate disease mechanisms, pathological changes, and their relationships with clinical manifestations. Research in this area may address neoplastic, inflammatory, infectious, degenerative, vascular, metabolic, and immune-mediated disorders, as well as advances in tissue-based diagnosis and molecular characterization. Emerging approaches such as digital pathology, spatial analysis, and precision diagnostics are further expanding the ability to identify disease-associated changes and support improved understanding of human disorders.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Human Pathology**. Potential topics include, but are not limited to:

- Surgical pathology
- Molecular pathology
- Cellular pathology
- Histopathology
- Cytopathology
- Hematopathology
- Neuropathology
- Dermatopathology
- Gastrointestinal pathology
- Renal pathology
- Pulmonary pathology
- Cardiovascular pathology
- Endocrine pathology
- Infectious pathology
- Immunopathology
- Oncologic pathology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Human Pathology**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	January 6th, 2027
Publication Date	March 2027
